About Me

I am an analytical and detail-oriented professional with experience in Presales and Product Operations, analyzing customer requirements, preparing technical proposals and BOQs, and coordinating with vendors to deliver technology solutions. To complement my professional experience, I completed end-to-end analytics projects using SQL, Python, Power BI, Tableau, and Excel to build dashboards, analyze profitability, and generate segment customer segmentation insights. Across both professional and analytics projects, I translated business requirements into data-driven insights and actionable recommendations. I work collaboratively with stakeholders and approach every project with strong business acumen, critical thinking, and attention to detail. With a strong business foundation and a commitment to continuous improvement, I am excited to contribute meaningful value in analytics-driven environments.

Working Experiences

Presales | Koperasi Konsumen Karyawan PT Applikanusa Lintasarta

Mar 2023 - Present

- Prepared 3–6 Bills of Quantity (BOQ) daily using Microsoft Excel to support client proposals and solution planning.
- Coordinated with vendors and maintained pricing data for 10,000+ products in Odoo ERP to ensure accurate quotations.
- Analyzed customer requirements and recommended technology solutions aligned with business needs and budgets.

Product Operations Intern | Innocircle Initiative

Aug 2021 - Dec 2021

- Maintained 1,000+ product, customer, partner, and sales records, ensuring accurate business information to support daily operations.
- Created 5 weekly content briefs, poster drafts, and social media captions for product promotion.
- Wrote weekly product-focused blog articles to increase product awareness.

Project Experiences

Corporate Profitability Dashboard | RevoU

Apr 2026 - May 2026

Developed an end-to-end business intelligence solution using SQL and Power BI to analyze corporate profitability.

- Presented an end-to-end business intelligence capstone project as a Top 5 Finalist before a panel of judges.
- Built a business intelligence dashboard using SQL and Power BI to monitor KPIs and profitability trends.
- Analyzed sales and profitability to identify business drivers and recommend improvement strategies.

Customer Segmentation using K-Means | RevoU

Apr 2026 - Apr 2026

Developed a customer segmentation model in Python to identify customer groups for targeted strategies.

- Cleaned and prepared customer transaction data using Python to ensure reliable analysis.
- Applied feature engineering and K-Means clustering to identify three customer segments based on transaction behavior.
- Interpreted customer segmentation results and recommended tailored marketing and retention strategies.
